PROFILE

I am a committed results-oriented new hire with background in both business development and web development internships. I offer a special set of abilities that bridge the gap between business strategy and technical execution because of my history in both customer interaction and technological development. Using technologies like JavaScript, React.js, Node.js, HTML, and CSS, I have proven my ability to recognize business prospects, cultivate great client connections, and contribute to web development projects. I'm eager to put my skills to use in a demanding position where I can support technological solutions and commercial expansion.

WORK EXPERIENCE

Web Development Inter

Afame Technologies

April-2024-aug-24

- 1. Participated in the design and development of responsive web applications remotely as part of a team of developers.
- 2. developed user interfaces and frontend components using HTML, CSS, and JavaScript, making sure they were accessible and cross-browser compatible.
- 3. acquired practical expertise with cutting-edge frontend frameworks, such React.js, to improve the functionality and interactivity of online projects.
- 4. contributed to the creation of reliable and scalable web solutions by helping to integrate backend functionalities utilizing technologies like Node.js.
- 5. I took part in daily stand-ups, code reviews, and debugging sessions to make sure project milestones were delivered on time and in good condition.

Project

Fitness-Tracker-App

created a feature-rich Java Fitness Tracker program to assist users in keeping track of their workout schedules, dietary intake, and general fitness advancement. used Java language features and object-oriented programming concepts to produce a user-friendly interface and reliable functionality.

Ticket Management System

created a dynamic ticket management system with Bootstrap, JavaScript, HTML, and CSS with the goal of improving ticketing procedures and handling customer queries and support requests more effectively. made use of front-end web technologies to guarantee cross-browser compatibility and produce an easy-to-use user experience.

Application for Online Food Delivery

created a working online food delivery application using Java Spring Boot on the back end and HTML, CSS, and JavaScript on the front end. For navigating menus, placing orders, and managing user profiles, the application has a responsive user interface. Order processing, real-time tracking, user authentication, and secure client-server connection are all handled by the server side. This project exhibits a solid grasp of end-to-end application architecture as well as full-stack development competency.
