Krishna Kumari Panigrahi

Objective - To work in an environment which encourages me to succeed and growprofessionally where I can utilize my skills and knowledge appropriately.

EXPERIENCE:

I completed 2-year 11 months in Wipro as Test Engineer. I have worked on ManualTesting, Automation Testing (cypress Automation and Selenium Automation).

DOJ: 26/08/2021

Role – Test Engineer

Responsibility -

- I develop test cases based on requirements and specification provided.
- Performing tests manually by executing test cases.
- Identifying the defects or bugs and documenting them during the testing.
- It raises defects using ALM tool and submits it to the developer. Aftersolving that defect, I must deploy the new build and retest the defect.
- I work on Regression test cases and GTC (Golden test Cases).
- Every sprint I must complete GTC and regression test cases and storytesting and giving demo to client.
- Documenting the test result, including pass/fail status and any issuesencountered of GTC and regression test cases.
- Every Sprint I must work on story testing, defect validation and writing testcases and document creating of Sprint story.
- I work on emergency release and production release.
- Write automated test scripts using testing framework such as Selenium andCypress tool.
- I use Java programming language in Selenium and Java script language inCypress.
- I must set up and configure test automation frameworks according toproject requirement.
- Running automated tests to validate application functionality andbehaviors.
- I must update and maintain automated test script to accommodate changesin application features.
- Generalize the test reports and Analyse that results to identify failures andareas for improvement.
