

Amit Yadav

To leverage my two year of experience as a .NET developer and contribute my skills and knowledge in a challenging and dynamic work environment. I aim to expand my expertise in .NET development, enhance my problem-solving abilities, and collaborate with a team of talented professionals to create innovative and efficient software solutions. By continuously learning and staying updated with the latest technologies and best practices, my objective is to make a significant impact and grow as a skilled .NET developer.

PROJECTS

VibExchange

- VibExchange is the first unique cloud based machine vibration and condition monitoring platform bringing together the international vibration consultants and technicians from across the globe. It has set up the trend of Cloud assisted machine vibration analysis and diagnosis services via a marketplace model ridding along a rating and ranking mechanism for service providers.

Task Management System

- Task management is the process of managing a task through its life cycle. It involves planning, testing, tracking, and reporting.
- A task management system is a software application or platform that helps individuals or teams organize, track, and manage tasks and projects effectively. It allows users to create, assign, prioritize, and monitor the progress of tasks, ensuring that work is completed efficiently and on time. Here's an overview of how a task management system can be designed and implemented.

Face Mask Detection using Python with Tensorflow

- In this project, we develop a pipeline to detect unmasked faces in images. This can, for example, be used to alert people that do not wear a mask when entering a building.
- To detect the people who are wearing a mask or not a software developed which detects the facemask with percentage accuracy.
